Summary

DevOps Engineer with production experience building CI/CD pipelines, containerizing multi-stack applications, and managing cloud infrastructure across multiple AWS accounts for international clients. AWS Certified Security – Specialty holder with a security-first approach to every pipeline and deployment. Equally comfortable automating infrastructure from scratch and collaborating with cross-functional engineering teams to ship reliable, observable systems fast.

Skills

Languages & Scripting: Python, Bash, PowerShell, SQL, Java, C/C++

Cloud & Infrastructure: AWS (EC2, S3, IAM, VPC, RDS, Lambda, CloudFormation, CloudWatch, ECR, STS), Azure, Terraform, Ansible

DevOps & Containers: Docker, Docker Compose, Kubernetes, Helm, GitHub Actions, Jenkins

Monitoring & Security: AWS CloudWatch, IAM Policy Design, SSL/TLS, Secrets Management

Tools: Git, GitHub, Boto3, REST API, Postman, Helm Charts

Work Experience

DevOps & Cloud Engineer — One Cloud Utopia, Remote Jan 2026 – Present

- Built and optimized CI/CD pipelines using GitHub Actions and Jenkins for 2 client projects, automating build, test, and deployment workflows across development and production environments, cutting release cycle time by ~70% and eliminating error-prone manual steps.
- Designed and managed cloud infrastructure across 4–7 AWS accounts (EC2, VPC, IAM, S3, RDS, CloudWatch) using Infrastructure as Code with CloudFormation, maintaining 99.9% uptime across all environments while keeping costs within tight client budgets.
- Containerized multi-stack applications (Java Spring Boot, .NET, React, Django) using Docker and Docker Compose, isolating 4+ services per environment with enforced network policies and container security hardening.
- Enforced least-privilege IAM policies and cross-account STS role assumption across all client accounts, integrating secrets management and security scanning into CI/CD pipelines to ensure continuous compliance.

Education

Bachelor of Computer Engineering — Far Western University Feb 2022 – May 2026 (Expected)

GPA: 3.77 / 4.0

Relevant Coursework: Computer Networks, Operating Systems, Database Systems, Advance Data Structures & Algorithms, Image Processing, Programming, Microprocessor and Microcontroller, IOT

Project Work

ServerControl: Multi-Account EC2 Management Platform 2026 – Present

Python, Boto3, AWS Lambda, DynamoDB, API Gateway, STS AssumeRole, CloudFront, Cognito

- Built a fully serverless SaaS portal enabling centralized control of EC2 instances across multiple AWS accounts via STS cross-account role assumption, with RBAC through Cognito user groups (admins, operators, viewers) and a complete DynamoDB audit trail of every action.
- Eliminated idle compute waste for 3 clients by implementing CloudWatch-triggered auto-stop with SNS alerting, saving an estimated \$200+/month in unnecessary EC2 runtime and reducing manual infrastructure monitoring to zero.

IoT Smart Agriculture Decision Support System 2026 – Present

FastAPI, Python, PostgreSQL, MongoDB, Docker Compose, GitHub Actions, AWS EC2, ESP32

- Engineered the full cloud infrastructure: containerized the FastAPI backend, MongoDB, and PostgreSQL using Docker Compose, and built a GitHub Actions pipeline that automated image builds and zero-touch EC2 deployments on every merge to main.
- Designed the end-to-end data pipeline from ESP32 sensor firmware through MQTT broker to a Python FastAPI backend, processing real-time telemetry for 4 co-located ML models and serving results via a Next.js dashboard — all running on a single containerized EC2 host.

Certifications

AWS Certified Security – Specialty (SCS-C03) Feb 2026

AWS Certified Cloud Practitioner (CLF-C02) Jan 2026
